

Debut PRO

[Visit the Website](#)

"Ignore this one at your peril. Highly recommended."

- We particularly like the **care** taken over the **finish of the tonearm bearing housing** with its smart **Nickel-plated metal parts**.
- Once up and running it delivers an **impressively crisp and detailed** sound for the money.
- It's a musically **convincing presentation**, one where each instrument dovetails beautifully to add to the experience.
- This Pro-Ject is terrific at **digging deep** into the production and **revealing layers of instrumental textures** that most at this level ignore.
- The Debut Pro produces a **stable and controlled sound** too, one that retains its composure even when the music becomes dense and demanding.
- The Debut Pro **doesn't flinch**, delivering the music's drama superbly.
- **Stereo imaging** proves admirable too, the Pro-Ject rendering a suitably **spacious and layered soundstage** that retains its **stability and precision** regardless of musical complexity.
- The Pro is the **most ambitious and sophisticated** Debut model we've heard. It is a **superb sounding package** that's built well and is easy to set-up.
